No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MetGluMetAlaLysGlyAlaPheLysThrGlnLeuGluValLeuGluLysValHisPro 89
                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLisfis) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the

The invention relates to an isolated NOVX polypeptide. A therapeutic, i.e. the NOVX polypeptide, nucleic acid and antibody, is useful for manufacturing a medicament for treating a syndrome associated with a human disease, e.g. a NOVX-associated disorder. The NOVX polypeptides can be used as immunogens or as vaccines. The NOVX polypeptide, nucleic acid or antibody is useful for diagnosing, treating or preventing a NOVX-associated disorder, e.g. cancer, diabetes, Alzheimer's disease, Parkinson's disease, Huntington's diaease, asthma, allergies, emphysema, bronchitis, autoimmune disease, graft-versus-host disease, arthritis, scleroderma, systemic lupus erythematosus, bacterial infections, cystic fibrosis, coronary artery disease, stroke, hypertension, myocardial infarction, haemophilia, idiopathic thrombocytopenic purpura, hyperlipidaemia, obesity, cirrhosis, inflammatory bowel disease, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New NOVX polypeptides and nucleic acid molecules, useful for diagnosing, preventing or treating NOVX-associated disorders e.g. cancer, diabetes, Alzheimer's disease, stroke, arthritis, hypertension or myocardial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Shimkets RA, Patturajan M, Vernet CAM, Casman SJ, Malyankar UM; Shenoy SG, Spytek KA, Gangolli EA, Miller CE, Boldog FL, Li L; Taupier RJ, Kekuda R, Smithson G, Zerhusen BD, Liu X, Colman SD; Tchernev VT, Si J, Edinger SR, Stone DJ, Sciore P, Millet I;

```

```
disease, ulcers, muscular dystrophy, myasthenia gravis, endometriosis, corporasis, alopecia, uveltis, amyotrophic lateral sclerosis, corpoprosis, osteoproses, osteoarthritis, liver disease, epilepsy, multiple sclerosis, anxiety, pain, fertility, glomerulomephritis, or polycystic Kidney disease. The NOVX polypeptides and nucleic acid molecules are useful for determining the presence of or predisposition to a disease consociated with altered levels of the NOVX polypeptide or the nucleic acid molecule, or for screening for molecules that inhibit or enhance NOVX activity or function. The nucleic acids may be used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, or pharmacogenomics. The present sequence represents cDNA encoding a human XX Sequence 7396 BP; 1878 A; 2016 C; 2290 G; 1212 T; 0 U; 0 Other;

white spot syndrome virus

Shrimp

WO200138351-A2

08-NOV-2000; 2000WO-US028888.

```
(AAH62689), predicted transcript sequences (AAH62689-AAH62839) and encoded proteins (AAG84910-AAG85051) and oligonucleotide sequences (AAH62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral gene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create transgenic viral resistant shrimp. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                            invention provides the primary nucleotide sequence of the WSBV genome

The invention provides the primary nuclectide sequence of the WSBV genome (AAH62689), predicted transcript sequences (AAH62689-AAH62839) and encoded proteins (AAG8910-AAG85051) and oligonuclectide sequences (AAH62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral agene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create transgenic viral resistant shrimp. New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, Crohn's disease, atherosclerosis, cancer, Huntington's disease
                                                                                                                                                                                                                               Human; NOVX; single nucleotide polymorphism; SNP; anti-HIV; cytostatic; antiarteriosclerotic; antidiabetic; antiasthmatic; antiinflammatory; haemostatic; hypotensive; neuroprotective; anorectic; nootropic; antidepressant; immunosuppressive; antibacterial; antiparasitic; virucide; tranquilizer; anticonvulsant; osteopathic; analgesic; antiparkinsonian; dermatological; antiinfertility; cerebroprotective; antiaddictive; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of several novel human proteins, designated NOVX. These can be used in the treatment of diseases such as cancers, Hodgkin's disease, Von Hippel-Lindau syndrome, Alzheimer's disease, etroke, tuberous sclerosis, hypercalcaemia, Parkinson's disease, Huntingron's disease, cerebral palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia telangiectasia, leukodystrophies, addiction, anxiety, depression, pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Shimkets RA, Patturajan M, Vernet CAM, Casman SJ, Malyankar U; Shenoy S, Sbyrek KA, Gangolli E, Miller C, Boldog F, Li L; Taupier RJ, Kekuda R, Smithson G, Zerhusen BD, Liu X, Colman SD; Tchernev V, Si J, Edinger S, Stone D, Sciore P, Millet I;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence therapy techniques to restore normal activity of (II) so useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging in the polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amine acid sequences. AASS4197-AASS94564 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1456 AAGGTGGCCGCCTACGACAAGCTGGAGAAGACCAAGACGCGGCTGCAGCAGGAGCTCGAC 4515

The present invention describes a method for identifying a compound that modulates angiogenesis or tumourigenesis. The method comprises: (a) contacting the compound with angiogenesis polypeptide. e.g. Ax1, tubulin cofactor D, transglutaminase 2, cytosine deaminase, peptidase Mx1, tubulin cofactor D, transglutaminase 2, cytosine deaminase, Gas6, SRm160, non-muscle myosin heavy chain, calmodulin 2, novel symporter, novel semaphorin, novel zinc finger helicase (FLJ22611), plexin.A2, deoxycytidylate deaminase or novel sugar transporter; (b) determining the functional effector of the compound upon the angiogenesis polypeptide or its fragment or inactive variant; and (c) determining the chemical or phenotypic effect of the compound upon a cell comprising the target polypeptide or its fragment or inactive variant; thus identifying a compound that modulates cell cycle arrest. Also described is a method of modulating campound has antiandiogenes; and can be used in a subject. The angiogenesis or tumourigenesis contibody, antisense and RNA interference (RNAi) therapies. The method is antibody, antisense and RNA interference (RNAi) therapies. The methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and compounds or compositions are useful in diagnosing and treating angiogenesis, cancer, stroke, infertility and heart disease. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              myosin heavy chain 9 protein, which

Note: R inflammation. Note: R inflammation. S666 (sequence listing were	Claim 1; Page 1918-1926; 6221pp; 1 The invention relates to polymucle encoded polypeptides (AAM78323-AAM cytokine, cell proliferation or or production of other cytokines in polymucleotides and polypeptides in polyted therapy. The polypeptides e.g. stem cell growth factor actiactivity, tissue growth factor actiactivity, tissue growth factor actiactivity, tissue growth factor actiactment of cancer, leukaemia, ninflammation. Note: Records for Si (AAK52582) and 3666 (AAM80020) art sequence listing were missing at Sequence 7516 BP; 1909 A; 2056 C;	Claim 1; Page 1918-1926; 6221pp; English. The invention relates to polymucleotides (AAK51456-AAK5343 encoded polypeptides (AAM78323-AAM80302) that exhibit actinotoxine, cell proliferation or cell differentiation or who production of other cytokines in other cell populations. The polymocleotides are useful in gene therap peptide therapy. The polypeptides have various cytokine-lip e.g. steem cell growth factor activity, haematopoiesis requactivity, tissue growth factor activity, immunomodulatory activity, tissue growth factor activity, in the diagnosi inflammation. Note: Records for SEQ ID NO 2110 (AAK52581); (AAK52582) and 3666 (AAM80020) are omitted as the relevant sequence listing were missing at the time of publication	5) and the vity elation with a lating we activity a collist activity a collist and/or arthritically pages fuher;	d the elating to any induce corines or trivities, ity and i/or itis and iits from the

The invention relates to a recombinant DNA construct comprising an open reading frame placed under the control of a non-native promoter. The open reading frame comprises bp 2389-2826 of the Yersinia peeris plasmid pPCP1, representing the pesticin immunity protein, a bacteriocin. Also disclosed are the sequences of the Yersinia plasmids pCD1 (responsible for the complex virulence response termed LCR, low calcium response) and pMT1 (encoding capsular proteins and a murine toxin). The recombinant DNA construct is useful for preparing a composition for diagnosing, treating or preventing infection caused by Yersinia peetis (e.g. bubonic plague). The present sequence is the pWT1 plasmid.
                                                                                                                                                                                                                                                                                                                                                New recombinant DNA construct comprising an open reading frame placed under the control of a non-native promoter, useful for preparing a composition for diagnosing, treating or preventing infection caused by Versinia pestis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ProLeuSerAlaGlnSerProSer -- ThrSerAspAlaProGlyAlaLeuLeuSerSer

The invention feature to a mover isolated move properties of the sequence of 57-1149 amino acids as defined in the specification, or its mature form; a sequence that is at least 95% identical to the 57-1149 amino acid polypeptide; or sequence comprising one or more conservative cubstitutions in the 57-1149 amino acid polypeptide. The NOVX proteins of the invention include the following protein families: FADD interacting protein-like, ATBRSE, H+ Transporting Lysosonmal (vacuolar Protein Dump)-like, Red 17-like, Single Pass Transmembrane-like, Beta-Ketoacyl Synthase-like, Nueralin 2-like, Glutamate Receptor Interacting Protein-like, Beta-Ketoacyl Synthase-like, Nueralin 2-like, RhoGAP-like, Phospholipase-like, NoGO rike, ELKS-like, Sim2-like, RhoGAP-like, Phospholipase-like, NoGO receptor Domain Containing Protein-like, Metallothionein IA-like, NoGO receptor Domain Containing Protein-like, Immunoglobulin Domain Containing Protein-like, Immunoglobulin Domain Containing Protein-like, Immunoglobulin Domain Containing Protein-like, Phenylalanine and Histidine Ammonia-Lyase-like, Cellular Retinaldehyde-Binding-like, Containing Protein-like, Metallopoulin Domain Containing Protein-like, Metallopoulin Brotein-like, Metallopoulin Brotein-like, Metallopoulin Brotein-like, Atburding Protein-like, Metallopoulin Brotein-like, Metallopoulin Brotein-like, Atburding Protein-like, Metallopoulin Brotein-like, Atburding Protein-like, Metallopoulin Brotein-like, Atburding Sorting Homologue R-VPS33A, Bola Domain Containing Protein The NoVX proteins and the encoding polymucleotides have cytostatic activity and can be used in gene therapy or a vaccine. The protein conding a composition for treating or preventing cancer. This polymucleotide sequence represents a gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 invention relates to a novel isolated NOVX polypeptide comprising: a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New NOVX polypeptide, useful for preparing a composition for treating preventing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Taupier RJ, Zerhusen BD;

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABR68902-ABR66849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell—complexative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, or lung fibrosis, infections (bacterial) viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            748
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   868
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           688

New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant ss; gene; human; arginine-rich protein; cancer; inflammation;

```
The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arguinne-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutationis responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arguinne-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |||| ::::::

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   capable of detecting 1000 or more genes from brosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB27072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180 AlaAsnMetIleAlaGlyLysAsnPro-----PheLysMetProGlnGlnMetArgLys 197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL01840-ABL16775) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the prince appertication, but was obtained in electronic format directly
                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               50 MetGluAlaLeuGluLeuMetGlyValGlnPheValAspAlaLeuIleLysLysGlyGln
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -----AAAGGCAAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        70 MetGluMetAlaLysGlyAlaPheLysThrGlnLeuGluValLeuGluLysValHisPro

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), proteins (ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                    Claim 1; SEQ ID NO 37324; 21pp + Sequence Listing; English.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

Patent No. 5837457

GENERAL INFORMATION:
APPLICANT: Liu, Pu.
APPLICANT: Collins, Francis S.
APPLICANT: Clarton, David
ITILE OF INVENTION: Markers for Detection of Chromosome 16
ITILE OF INVENTION: Rearrangements
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Harness, Dickey & Pierce, P.L.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDIUM TYPE: Floppy disk
